When In Doubt, Get Tested!

Students should test when symptomatic or after a COVID-positive exposure to help keep others safe from the spread of COVID-19.

- Have a mild sore throat or a runny nose? This may be more than seasonal allergies
- Experiencing a fever? This may not be just the flu
- Experiencing fatigue, a headache, and/or body aches? This may not be a result of burnout from school
- Has a close friend or family member recently tested positive for COVID? Get tested to stop the spread

COVID-19 symptoms can range from mild to severe. If you begin to experience any mild symptoms, do not ignore them, instead test immediately.

Help to keep our campus safe by testing when symptomatic or exposed to COVID-19.
